## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

2. Receipt is acknowledged of the Information Disclosure Statement (IDS) received October 15, 2004.

### ***Drawings***

3. Figures 1-5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2652

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of Ohira et al (US 4,642,713). As per claim 1, Applicant's Admitted Prior Art (AAPA) shows in figure 4 a tape guide mechanism of a magnetic recording and reproducing apparatus that includes a movable chassis 1 having a tape guide arm member 20 on which a tape guide 17 is erected. Figures 1-3 shows a pair of reels stands 3 & 4 on movable chassis 1 and a fixed chassis 2 having a magnetic rotary head 8 thereon in which when the movable chassis 1 moves to one position of the fixed chassis 2, loading and unloading of a cassette 18 is performed.

When the movable chassis 1 moves to the other position, a magnetic tape 19 is taken out from the reel of the loaded cassette 18 to perform tape loading of the magnetic tape 19 being wound around the magnetic rotary head 8. After completing the tape loading, the tape guide is fixed to a predetermined position. In the middle of the tape guide 17 traveling to the predetermined position, the tape guide arm member 20 is made to move along a groove 23 provided in the fixed chassis 2 to determine the position in the chassis plane direction and is guided and moved by the projections provided on the lower surface of the tape guide arm member 20 to determine the position in the height direction.

As per claim 2, figure 3 shows the tape guide 17 is fixed to a predetermined position by arrangement of tension of the magnetic tape 19 loaded onto the tape guide 17.

AAPA, however, is silent as to a guide receiving member having a guide receiving portion that is provided on the fixed chassis to receive the tape guide.

Ohira et al shows in figure 1 a guide receiving member having a guide receiving portion that is provided on the fixed chassis to received the tape guide.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide the tape guide mechanism of a magnetic recording and reproducing apparatus of AAPA with a guide receiving member having a guide receiving portion that is provided on the fixed chassis to received the tape guide as taught by Ohira et al.

The rationale is as follows: one of ordinary skill in the art at the time the invention was made would have been motivated to provide a tape guide mechanism of a magnetic recording and reproducing apparatus with a guide receiving member having a guide receiving portion that is provided on the fixed chassis to received the tape guide “for positioning the loading pole” or tape guide. See column 8, lines 27-32.

#### ***Allowable Subject Matter***

6. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
